

Great Engineering Work leads to Additional Cooperation

Based on a very positive experience with one installation of HJ Mechtronic SIP onboard a vessel with a MAN B&W 5L70MCE engine, Indian shipping company Sanmar Shipping Limited decided to install the same on another of their vessels, when she was up for dry docking in July 2014.

First installation in January 2014

Onboard the vessel M/V “Sanmar Phoenix”, the installation of HJ Mechtronic SIP was done in January 2014, in China, and the performance of the new equipment has been good with savings in cylinder oil consumption and a general improvement in cylinder condition.

The HJ Mechtronic SIP solution

The solution that was installed onboard M/V “Sanmar Phoenix” is a combination of mechanical lubricators, the innovative HJ SIP valves designed to ensure fresh cylinder oil with every piston stroke and optimal distribution of the oil, as well as HJ Mechtronic, electronic load regulation.

In other words, Sanmar Shipping opted for the combination of the very reliable mechanical lubricators, the SIP valves, and the electronic flexibility of HJ Mechtronic.

Quick Results

Having commissioned the system in January 2014, and based on a three month very positive result, Sanmar Shipping decided on the next installation during dry dock in July 2014.

M/V “Sanmar Paragon”, MAN B&W 6S60MC, was chosen as the next vessel, and the cylinder lubrication solution was once again HJ Mechtronic SIP.

Excellent Work by Hans Jensen Service Engineers

Apart from the results obtained with the equipment, what particularly impressed the PIC from Sanmar Shipping, Mr. Kashyap, was the installation work performed by the Hans Jensen Lubricators’ service engineers, which he expressed during the discussions for the installation arrangements for M/V “Sanmar Paragon”

In his words - *“I would appreciate if we have a similar team as Sanmar Phoenix (3 persons) since the installation and commissioning went off with clockwork precision”*

Sanmar Shipping

Sanmar Shipping Limited, established in 1994, is a part of the Sanmar Group, a business conglomerate that has presence in Chemicals, Shipping, Engineering and metals.
